FEATURES:

1. Access Your Data

Store your files, folders, contacts, photos, calendars and more on a secure server. Access that folder from your mobile device, your desktop, or a web browser. Access your data wherever you are, when you need it.

2. Sync Your Data

Keep your files, contacts, photo galleries, calendars and more, synchronized amongst your devices. One folder, two folders and more – get the most recent version of your files with the desktop and web client or mobile app of your choosing, at any time.

3. Share Your Data

Share your data with others and give them access to the documents and files they need or anything else you want them to have access to. Select whether you want to share the data publicly, or privately.

4. Versioning

To revert to a previous version of a file, simply hover over your file and roll back to the desired version. Sophisticated access rights allocation allows you to enable this feature to selected users.
