

TM Synergia

CONNECT
THE DOTS.
DISCOVER
OPPORTUNITY.

• EFFICIENCY

Our performance analysis ensures that the ships are using the most efficient routes taking weather into account. Machinery is monitored, hull and propeller degradation data tracked to take conclusive decisions improvement. Progress is measured for tangible results.

• COST-EFFECTIVE

Ease of monitoring means that the ships can be provided with timely alternatives on optimising voyages. The analytics module not only represents the data from noon reports or live data but also quantifies the potential savings in dollar terms. This results in higher voyage earnings.

• SCALABILITY

With our highly specialised packages to set zones, alarms, SSAS calls to CSO and EU MRV/IMO DCS reports, we ensure compliance with regulations with minimum efforts from operators.

• COMPLIANCE

Our platform reduces the burden on the superintendents to manually check noon reports. It presents the information over a smooth UI for the office to monitor the performance of its assets. The same subject matter experts can use the tool to manage a large number of ships' performance.

UNIQUE VALUE

- Optimized vessel/fleet performance through advanced analytics and insights.
- Operational expenses reduction.
- Operational data conversion to real business value.
- Effortless regulatory compliance with both EU MRV & IMO DCS regulations.
- Infrastructure ready to complement any future needs for automated reporting.
- Administrative burden reduction.

TOTO THEO
MARITIME

**SEE YOUR BUSINESS
LIKE NEVER BEFORE.**

TM Synergia brings together your data, information, systems, processes and other resources into a powerful and flexible platform designed specifically for the maritime industry to see beyond the numbers and find opportunity.

See your business like never before. A robust software-as-a-service (SaaS) platform, which capitalizes on the dynamic and complex interactions between internal and external resources.

TM Synergia gives you real-time information in an easy-to-read visual format with snap-shot reporting. Behind the scenes, the

state-of-the-art platform allows machine learning and the deployment of advanced analytics to dig deeper than ever before into business operations.

Analyzing your fleet and voyage data, TM Synergia helps you gain new insight, make better informed decisions, and optimize your operations. It seamlessly connects the ship's crew with their technical and nautical departments in the office thus allowing them to perform analytics and statistics across a number of parameters relating to one ship or a whole fleet.

Fully scalable and manageable offering a comprehensive service, including real time consulting and advice from experts who work 1n direct communication with the Master and the Superintendent.
